WEEK 6 ASSIGNMENT

SYMPHONY OF SIGHT AND SOUND

AI FOR FUTURE WORKFORCE · GENERATIVE AI

A 60-Second AI-Generated Video

A Day in My Life

Submitted by	Anu V Nair
Assignment	Week 6 – Symphony of Sight and Sound
Theme	A Day in My Life – learning, work and creativity
Duration	60 seconds
Format	MP4 video with AI-generated soundtrack

Creative process documentation and production plan

1. Introduction

The Week 6 assignment, **Symphony of Sight and Sound**, requires an individual 60-second AI-generated video about a day in one's life, accompanied by AI-generated audio that enhances the storytelling. The final output should combine visuals and sound into one cohesive multimedia piece.

This report proposes a short video titled **"A Day in My Life – Learning, Work and Creativity."** It follows a simple day from the quiet start of the morning to focused work, creative problem-solving and a peaceful evening. The story is designed to have a clear beginning, middle and end.

2. Objective

To create a 60-second visual narrative using AI video-generation tools and a complementary AI-generated soundtrack. The video will use a consistent visual style, clear scene transitions and audio that changes with the mood and pace of the story.

3. Theme and Story Concept

Theme: A Day in My Life – learning, work and creativity
Mood: Warm, inspiring, calm and optimistic
Visual style: Cinematic, realistic, soft natural lighting, gentle camera movement and a warm neutral colour palette
Core message: Every day is a balance of responsibilities, learning and small creative achievements.

Narrative summary

The video begins with morning sunlight entering a room. The day moves into planning and learning, followed by focused computer-based work. A creative moment shows ideas developing into a visual concept. As the day comes to an end, the pace slows and the final scene reflects on progress and the possibilities of tomorrow.

4. 60-Second Video Storyboard

Time	Visual / action	Camera and transition	Audio direction
0–10 sec Morning	Sunlight enters a quiet room. A person opens the curtains, prepares a drink and looks at the day ahead.	Slow establishing shot; gentle fade-in.	Soft piano begins with light morning ambience.
10–20 sec Planning	A notebook or digital planner is opened. Tasks are written down and a laptop is switched on.	Close-ups of hands and notebook; smooth cut.	Piano continues; subtle rhythmic pulse enters.
20–32 sec Learning	The person studies on a laptop, reviews notes and learns something new.	Over-the-shoulder shot; gradual push-in.	Warm, steady instrumental rhythm builds.
32–45 sec Creative work	A computer screen shows a creative digital workflow: ideas, visual references and a developing animation or design.	Short sequence of close-ups; match cuts between screens and notes.	Music becomes more uplifting; gentle electronic texture.
45–54 sec Pause and reflection	The person takes a short break, looks outside and reflects on the day.	Wide, calm shot; slower pacing.	Music softens; ambient sound briefly becomes noticeable.
54–60 sec Evening	The laptop is closed. Evening light fills the room; the person smiles and looks toward tomorrow.	Slow pull-back and fade to black; end title: "One day. Many possibilities."	Music resolves with a gentle final piano note.

5. AI Video Generation Prompts

Generate each scene as a separate short clip (approximately 6–12 seconds), then assemble the clips in the order shown above. Use the same main subject description and visual style in every prompt. If the video tool supports

reference images, use the same reference image to improve continuity.

Scene 1 – Morning

Cinematic realistic video, peaceful morning in a modest modern room, warm golden sunlight slowly entering through a window, a young adult woman opens the curtains and begins her day, natural movements, soft warm neutral colour palette, gentle camera movement, calm inspiring mood, 16:9.

Scene 2 – Planning

Continue the same cinematic style and same woman. Close-up of her hands opening a planner, writing a short to-do list and switching on a laptop at a tidy desk, natural daylight, realistic details, smooth camera movement, focused mood, 16:9.

Scene 3 – Learning

The same woman sits at her desk learning from an online lesson on her laptop, reviewing notes and concentrating, over-the-shoulder view and close-up details, warm natural light, realistic cinematic video, subtle camera push-in, 16:9.

Scene 4 – Creative work

Continue with the same woman and workspace. Show her working on a creative digital project on a computer, visual references and animation frames on screen, thoughtful expressions, hands using keyboard and mouse, cinematic close-ups, professional creative atmosphere, 16:9.

Scene 5 – Reflection

The same woman pauses from work, stands near a window and looks outside thoughtfully, late afternoon light, peaceful atmosphere, gentle camera movement, realistic cinematic video, warm muted colours, 16:9.

Scene 6 – Evening ending

The same woman closes her laptop at the end of the day, soft evening light in the room, a quiet satisfied smile, camera slowly pulls back, peaceful hopeful cinematic ending, fade-out feeling, 16:9.

Continuity guidance

Repeat the same subject, clothing description, room layout and colour palette in all prompts. Avoid changing several elements at once. If a generated clip changes the subject's appearance, regenerate it or use a reference-image feature where available. Keep each scene visually simple so that the intended action is clear.

6. AI-Generated Audio Plan

The soundtrack should support the emotional progression of the video rather than compete with it. The selected mood is **calm, hopeful and inspiring**. An instrumental track is suitable because it allows the visuals to remain the main focus.

Suggested AI music-generation prompt

> Create a 60-second instrumental background soundtrack for a short cinematic video about a person's day of learning, work and creativity. Begin with gentle warm piano and soft morning ambience. Gradually add a light modern beat and subtle electronic textures as the day becomes productive. Build to an uplifting but not dramatic section during the creative-work scene. Reduce the intensity for the reflective evening moment and finish with a peaceful resolved piano note. No vocals, no lyrics, positive and thoughtful mood, smooth transitions, moderate tempo, clean production.

Optional sound effects

Use very subtle ambient sounds only where they improve the scene: morning birds, a curtain moving, a notebook page turning, soft keyboard typing and a quiet evening ambience. Keep these sounds low in the mix so the music and visuals remain clear.

7. Audio and Video Synchronization

- Start the soundtrack at the first frame and fade it in over approximately one second.
- Align the morning piano with the opening sunlight shot.
- Introduce the light rhythm as the planning and learning scenes begin.
- Let the music reach its most uplifting point during the creative-work scene.
- Reduce the volume and intensity during reflection.
- End the video and soundtrack together with a short fade-out.
- Keep background music below any voice-over or important sound effects.

8. Editing and Finalization Workflow

1. Generate or select the base visual references for the six scenes.
2. Generate the six video clips using an AI video tool.
3. Review each clip for visual quality, continuity, unwanted distortions and correct duration.
4. Generate the instrumental soundtrack using an AI audio-generation tool.
5. Import the clips and soundtrack into a video editor such as CapCut, DaVinci Resolve or another available editor.
6. Arrange the clips in storyboard order and trim them to a total duration of 60 seconds.
7. Add transitions, title text and optional sound effects.
8. Synchronize the audio, adjust volume levels and apply fades.
9. Watch the complete video from beginning to end and correct any timing or continuity issues.
10. Export the final video as MP4 (H.264), preferably 1080p, and check that both picture and sound play correctly.

9. Tools and Technical Workflow

The assignment asks students to list the generative AI tools and other software actually used. The following is a suggested tool plan; replace or remove any tool that is not used in the final production.

Task	Suggested tool / role
AI video generation	Google Veo or another AI video-generation tool discussed in class – create and extend the scene clips.
AI audio generation	Suno or another AI music-generation tool – create the instrumental soundtrack.
Video editing	CapCut or DaVinci Resolve – arrange clips, add transitions, titles and synchronize audio.

Task	Suggested tool / role
Optional audio refinement	Audio controls in the editor – adjust soundtrack level, fades and sound effects.

10. Challenges and Solutions

Maintaining visual consistency: AI video tools may change the subject's face, clothing or surroundings between clips. **Solution:** Repeat the same subject and setting details, use reference images when supported and review clips before editing.

Unwanted motion or visual artifacts: Generated clips may contain distorted hands, objects or unnatural movement. **Solution:** Use simple actions, shorter shots and regenerate clips that contain distracting errors.

Audio not matching the scene: A soundtrack may feel too energetic or too slow for the visuals. **Solution:** Specify the mood and progression in the music prompt, then adjust timing and volume in the editor.

Timing the final video: Independently generated clips may not fit the one-minute limit. **Solution:** Trim each clip to the storyboard timings and verify the final export duration.

11. Creative Reflection

This project demonstrates that video and audio generation are most effective when they are planned together. The storyboard provides a clear structure for the visuals, while the soundtrack helps communicate the changing mood of the day. AI tools can speed up the creation of scenes and music, but human review remains important for continuity, timing, sound balance and storytelling quality.

12. Conclusion

“A Day in My Life – Learning, Work and Creativity” presents an ordinary day as a short visual journey. The opening establishes the setting, the middle focuses on learning and creative work, and the ending provides a calm reflection. By combining AI-generated video, AI-generated music and careful editing, the project aims to create a cohesive 60-second multimedia story that meets the Week 6 assignment objectives.

13. Submission Checklist

- ■ Final 60-second MP4 video exported and checked.
- ■ AI-generated soundtrack included and synchronized.
- ■ Creative process documentation completed.
- ■ Actual AI tools and editing software listed.
- ■ Video has a clear beginning, middle and end.
- ■ Final playback checked for audio, visuals and timing.

Important submission note

This PDF is the creative-process report, storyboard and prompt plan. It is not the completed 60-second video. The assignment presentation separately requires submission of the final video file, so the generated clips and soundtrack must still be created, edited and exported before final submission.
